Programming Skills

Languages

HTML
CSS/SCSS
JavaScript
TypeScript
C#
Python

Database Services

SQL
MSSQL
MySQL

Frameworks

React Native/React.js
Node.js
Angular/AngularJS
Karma
ASP.NET

Tools

Git
Postman
Jira

Summary

Passionate and energetic software developer. Experienced working in a fast paced agile environment. Have a keen interest in the areas of AI, cryptography, security and web development.

Experience

Full Stack Software Developer at IRLCA, Dublin

MAY 2019 — APRIL 2022 (3 YEARS.)

Key Achievements :

- Achieved highest probation review score in the company at the time.
- Contributed large amounts to a project which has gone live in a large pharmaceutical company.

Experience :

- Spent 70% of development time working on the frontend using angular as the frontend framework. This involved writing and testing typescript, html and SCSS to create complex components and services..
- Spent 30% of development time working on the C# backend leveraging the ASP.NET framework and the MSSQL Database design and management.
- Effectively translated design specifications and requirements into well written code. This included frontend angular components consisting of HTML, CSS and Typescript, backend REST API to perform server sided operations and provided a connection to communicate with the MSSQL database. And SQL scripts to create database schema and stored procedures.
- Experienced with test driven development using the Karma JavaScript Testing environment.
- Designed and deployed NuGet and Node packages / libraries.
- Implemented an OAuth 2.0 Identity and access management system using OKTA and other third party identity services along with implementing an internal IAM system.
- Implemented an electronic signature system to perform signatures on documents with secure key management.
- Designed deployment architecture on AWS using EC2, VPC , Backup.
- Deployed enterprise application on AWS.
- Gained experience working with others in an agile team developing high-level industry regulation-compliant web applications. Helped manage and regulate code changes.
- Brought forth a passion, dedication, and enthusiasm for completing software development sprint tasks.
- Analysed and designed new systems and applications. Helped to provide industry-leading solutions.

Software Engineering Projects

Soccer Event Detection

Developed and trained a model for event detection in soccer video. Created a website where videos can be uploaded and ran through the model to produce highlight videos of the game.

- Created models using python and tensorflow .
- Performed data analytics and data engineering on large video dataset(500gb+)

Languages

English – Native Speaker

- Created angular frontend and node.js backend.

Education

Secondary Education, Castleknock Community College, Dublin

2012 — 2017

Computer Applications, Dublin City University , Dublin

AUGUST 2017 — 2021

Achievements:

2:1 grade

Relevant Coursework: ARM Assembly, Operating Systems Architecture, Computer Architecture, Linux/Unix Programming, Concurrent Programming, Object-Oriented Programming, Functional Programming, AWS, Software Engineering, Application Development, Project Management, Relational Database Design & MySQL, Data Communication & Cryptography, Data Engineering & Analytics, AI & Machine Learning models, JUnit Testing, MATLAB & R, Probability & Statistics, Data Visualisation & Processing, Computer Vision, Computational Linguistics, C# Java, Python, Haskell, Programming.
